31 A.	(i) Contra Voucher A Contra Voucher is used to record transactions involving cash and bank accounts only. It is prepared when: • Cash is deposited into bank • Cash is withdrawn from bank • Transfer from one bank account to another (ii) Post-dated Voucher A Post-dated Voucher is a voucher prepared on the current date but entered in the books on a future date. It is used when: • Payment or receipt is scheduled for a future date • Post-dated cheques are issued or received The entry is recorded only on the specified future date. (iii) Receipt Voucher A Receipt Voucher is used to record cash or bank receipts. It is prepared when: • Cash is received from customers • Cheque is received • Any other amount is received OR Advantages of Pivot Table Report 1. Summarizes large data quickly 2. Easy data analysis (totals, averages, counts etc.) 3. Flexible arrangement (rows and columns can be rearranged easily) 4. Quick comparison of data 5. Automatic calculations 6. Time-saving and user-friendly	3
32.	Three limitations of Computerised Accounting System: 1. High Initial Cost Installation of hardware, software, and training of staff requires significant investment. 2. Risk of Data Loss Data may be lost due to system failure, virus attack, hacking, or power breakdown if proper backup is not maintained. 3. Dependence on Skilled Personnel Trained staff is required to operate and maintain the system. Lack of technical knowledge may lead to errors.	3

33 A.	Data Validation is a feature in MS Excel that controls the type of data entered into a cell. It ensures that users enter correct and specific data according to predefined rules. For example: • Allowing only whole numbers between 1 and 100 • Allowing only dates within a certain range • Creating a drop-down list of allowed values It helps in maintaining accuracy and consistency of data. OR 33 B. The Error Alert tab in Data Validation allows you to: • Display an error message when invalid data is entered • Prevent incorrect data entry • Choose the type of alert: ○ Stop (Prevents entry completely) ○ Warning (Allows entry after warning) ○ Information (Shows message but allows entry) It helps in controlling wrong inputs effectively.	4
34.	The formula =SUM(B2B3) will display a #NAME? error. Reason: Excel shows #NAME? error when: • The formula contains incorrect syntax. • A range operator (:) is missing between cell references. In =SUM(B2B3), the colon (:) between B2 and B3 is missing. Steps to Correct the Error: 1. Select the cell showing the error. 2. Click on the Formula Bar. 3. Correct the formula by inserting a colon between the cell references: =SUM(B2:B3) 4. Press Enter. The formula will now correctly calculate the sum of cells B2 and B3. Correct Formula: =SUM(B2:B3)	6
